# Transfer of Trauma Patients from CCECs

07/01/15 – 06/30/16

- There were 1,072 transfers from CCECs to Levels I through III trauma centers in SFY16. Over 75% of the transfers from urban CCECs took more than 2 hours.

	Rural	Urban
# of Transfers	548	524
Transfers Within 2 Hours	56%	23%
Transfers Longer than 4 Hours	21%	30%

- At least 38% of the urban transfers bypassed the closest appropriate trauma center.
- Approximately 8% of the trauma patients who arrived at urban CCECs were severely injured (Injury Severity Score > 15).
  - 61% of these patients were not transferred within two hours.
  - 49% of these patients would have triggered a trauma team response at a higher level of care.
  - 56% of these patients, when transferred, bypassed the closest appropriate trauma center.
- CCECs are not capable of adequately caring for severely injured patients.

## Relevant Trauma Rules

### 6CCR 1015-4 202.C.4. Nondesignated Facilities

"Within two hours of recognition that a patient has experienced a significant injury or mechanism as defined in 6 CCR 1015-4, Chapter Two, Sections 202C, 202D or the prehospital algorithms (exhibits A and B), the facility shall resuscitate, stabilize and/or initiate transfer of the patient, after consultation with a trauma surgeon or emergency physician at the closest designated trauma center.

Transfer shall be to the closest appropriate trauma facility as defined by RETAC protocols and as determined in consultation with the trauma surgeon or emergency physician. Nondesignated facilities must transfer all trauma patients except those defined in 6 CCR 1015-4, Chapter Two, Section 202.C.5."{Emphasis added.}
